# Splash Screen

Clean . Flat . Minimal Design

No more background icons. Only clean & flat splash screen. It gives you feeling of something very easy to use or something fresh. Isn't it ?

New Chat List

I am try to make something meaningful and easy to use for user. This is my concept for New Material desing based WhatsApp chat list screen.

- New Square images for a bigger & better view.

- New fresh Notification buggle.

- Quick messsage flotting button.

- Easy to swipe screens

New Call Screen

As all of you already know about the whatsApp new Calling Feature. Its a great feature that we all are waiting since a long time. But when I saw the recent call detail screen, its not very appeling to me. Isn't ?

So I give time to myself to think that how to create a cool and interesting solution for that. And here is my answer!

New Slide Menu Screen

New Improved simple, easy & smarter slide menu for a better user-experience.

New Profile Screen

I use a full image on top. This screen should be more personal. I try to make it more cleaner & more infomational.

I mix Android Material Desing Guidlines with user needs & put a spoon of creativity and blend all things togather in Photoshop!

And Profile screen is ready to surve:)
